PRECAUCIONES DE SEGURIDAD

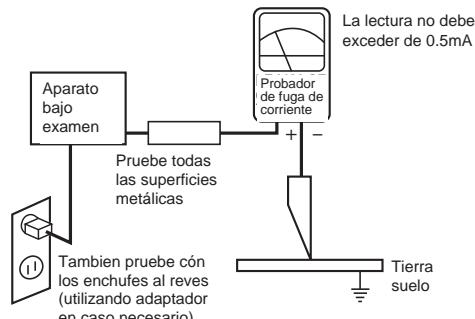

ADVERTENCIA: Antes de dar servicio a este chasis, lea "PRECAUCIONES RESPECTO A RADACION POR RAYOS X", "INSTRUCCIONES DE SEGURIDAD" y "AVISO SOBRE SEGURIDAD DE PRODUCTOS"

INSTRUCCIONES DE SEGURIDAD

1. Cuando el receptor está en operación, se producen voltajes potencialmente tan altos como 25,000-29,000 voltios. Operar el receptor fuera de su gabinete o con la tapa trasera removida puede causar peligro de choque eléctrico.
 - (1) Nadie debe intentar dar servicio si no está debidamente familiarizado con las precauciones que son necesarias cuando se trabaja con un equipo de alto voltaje.
 - (2) Siempre descargue el ánodo del tubo de la imagen a tierra para evitar el riesgo de choque eléctrico antes de remover la tapa del ánodo.
 - (3) Descargue completamente el alto potencial del tubo de imagen antes de manipularlo. El tubo de la imagen es de alto vacío y, si se rompe, los fragmentos de vidrio salen despedidos violentamente.
2. Si se quemara algún fusible de este receptor de televisión, reemplácelo con otro especificado en la lista de partes.
3. Cuando reemplace tableros o plaquetas de circuitos, cuidadosamente enrolle sus alambres alrededor de las terminales antes de soldar.
4. Cuando reemplace un resistencia de vataje (resistor de película de óxido metálico) en el Tablero o Plaqueta de circuitos, mantenga la resistencia a un mínimo de 10mm de distancia.
5. Mantenga los alambres lejos de componentes de alto voltaje o de alta temperatura.
6. Este receptor de televisión debe conectarse a una fuente de 100 a 240 V AC.
7. Antes de devolver este aparato al cliente, haga una verificación de fuga de corriente sobre las partes metálicas del gabinete expuestas, tales como antenas, terminales, cabezas de tornillos, tapas de metal, palancas de control etc., para estar seguro de que el equipo funciona sin peligro de choque eléctrico. Enchufe el cordón directamente al tomacorriente de la línea de AC 100-240V.

No utilice una línea aislada de transformador durante esta verificación. Use un voltímetro de 1000 Ohmios por voltio de sensibilidad o más, en la forma que se describe a continuación.

Cuando la unidad está ya conectada a la AC, pulse el interruptor primero poniéndolo en "ON" (encendiendo) y luego en "OFF" (apagando), mida desde un punto de tierra conocido, tal como una (cañería de metal, una manija metálica, una tubería etc.) a todas las partes metálicas expuestas del receptor de televisión (antenas, manijas de metal, gabinetes de metal, cubiertas de metal, palancas de control etc.,) especialmente cualquiera de las partes metálicas expuestas que puedan ofrecer un camino hacia el chasis. Ninguna medición de corriente eléctrica debe exceder de 0.5 miliamperios. Repita la prueba cambiando la posición del enchufe en el tomacorriente. Cualquier medición que no esté dentro de los límites especificados aquí representan un riesgo potencial de choque eléctrico que debe ser eliminado antes de devolver el equipo al cliente.

AVISO SOBRE SEGURIDAD DE PRODUCTOS

Muchas de las partes, electricas y mecánicas en este chasis tienen características relacionadas con la seguridad. Estas características frecuentemente pasan desapercibidas en las inspecciones visuales y la protección que proporcionan contra la RADACION DE RAYOS-X no siempre necesariamente se obtiene al mismo grado cuando se reemplazan piezas o componentes diseñados para voltajes o vatajes mayores, etc. Las piezas que tienen estas características de seguridad se identifican por la marca **△** impresa sobre el diagrama esquemático y la marca **;** impresa en la lista de partes. Antes de reemplazar alguno de esos componentes, lea cuidadosamente la lista de este manual. El uso de partes de reemplazo que no tengan las mismas características de seguridad, como se especifica en la lista de partes, puede crear Radiacion de Rayos-X.

INSTRUCCIONES DE AJUSTE

1. Rango de Aplicación

Estas especificaciones se aplican a todos los TV PDP de 42" con chasis PN61A.

2. Especificaciones

- (1) Debido a que éste no es un chasis caliente, no es necesario usar un transformador aislado. Sin embargo, el uso de un transformador aislado ayudará a proteger el instrumento de prueba.
- (2) El ajuste debe hacerse en el orden correcto.
- (3) El ajuste debe efectuarse dada la circunstancia de $25\pm5^{\circ}\text{C}$ de temperatura y $65\pm10\%$ de humedad relativa si no existe otra designación específica.
- (4) El voltaje de entrada del receptor debe mantener 100-240V, 50/60Hz.
- (5) El receptor debe ser operado por cerca de 15 minutos antes del ajuste.

- Despues de recibir el Blanco Completo RGB en el Modo HEAT-RUN, el receptor debe ser operado antes del ajuste.
- Entre al MODO HEAT-RUN
 - (1) Presione la TECLA POWER ON en el C/R para ajuste.
 - (2) Se despliega el OSD y la pantalla despliega el 100% del PATRÓN COMPLETO DE BLANCO.
- * La unidad es activada en HEAT-RUN sin generador de señal en este modo.
- * Se usa el patrón de color único (ROJO /AZUL / VERDE) del MODO HEAT RUN para verificar el panel.

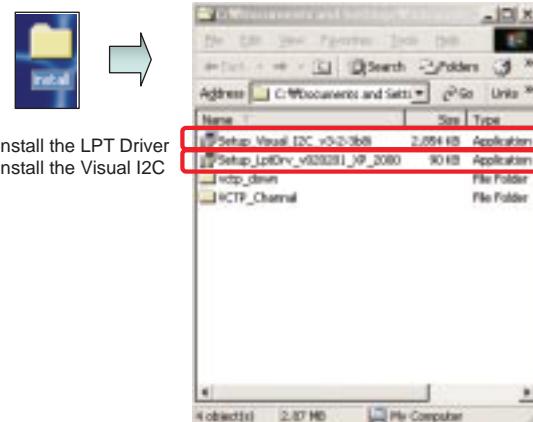

(Precaución) Si enciende una pantalla fija por más de 20 minutos(Especialmente patrón digital, patrón o cross hatch), puede presentarse una imagen diferida en la parte del nivel negro de la pantalla.
